Cover letter

My name is Eneko Ruiz Mollón, I am from Rentería (Gipuzkoa), and in March 2027 I will complete my Bachelor's Degree in Computer Engineering (Software Engineering track) at UPV/EHU. I am looking to join a team as a junior developer.

How I work. To me, a good technical solution is not the most complex one, but the one that solves the need with the minimum necessary code while accounting for all scenarios: secure, resilient if the connection drops, clean in appearance, and accessible to anyone. That same standard guides everything I do, including this résumé. Scanning the QR code in the header will take you to my interactive portfolio, which I designed and built myself with the same attention to detail.

What I have learned in real environments. I have built a booking system for a local business and a tracking application with active users. Both taught me something no university course covers: when real people use your software, details are never optional. During my internship, I brought that same standard: I modeled databases in PostgreSQL, integrated frontend and backend with React and Supabase, and suggested technical alternatives whenever I spotted an opportunity to simplify or improve.

What I am looking for. A rigorous team where I can learn from more experienced engineers and contribute, from day one, sound judgment, consistency, and care for the code I write. I am eager to learn, tackle real challenges, and accelerate my growth in a demanding work environment. My goal is to learn quickly, take on responsibilities, and establish myself as an autonomous and reliable developer for the team.

I am available to work on-site, hybrid, or remotely, and I would welcome the opportunity to discuss in person how I work.

Kind regards,
Eneko Ruiz Mollón

Professional Summary

Software engineer oriented towards Full Stack and DevOps, with hands-on experience building web applications for local businesses and personal projects. I work with web interfaces, API development, Docker containers and automated checks in GitHub Actions. Eager to join a team where I can add value, solve real problems and continue growing professionally.

Education

Bachelor's Degree in Computer Engineering

09/2023 – 03/2027 (expected)

University of the Basque Country (UPV/EHU) · Software Engineering track

Final Degree Project: extending the StudiOS platform for the photography sector.

Languages

English
C1
Official Cambridge certificate

Basque
C1
Official HABE certificate

Spanish
Native

Professional Experience

Full Stack Developer (Internship)

05/2026 – 08/2026

SST PRO DYNAMICS SLL

- Full stack development on a web platform with React, integrating new frontend features with Supabase backend services.
- Designed the data model, tables and queries in PostgreSQL.
- Proposed technical alternatives to the team, drawing on experience from my own projects.

Projects

Booking system for a beauty salon React, TypeScript, Next.js, Firebase, Google Calendar API, Resend

I built the booking flow and admin panel for a salon. The backend checks for overlaps, syncs appointments with Google Calendar and emails confirmations.

Reminders and tasks app React, TypeScript, Zustand, IndexedDB, Node.js, Express, Prisma, PostgreSQL

I built a task app that works offline, saving changes in IndexedDB and syncing them with a PostgreSQL-backed API when connectivity returns.

Password manager React, TypeScript, Web Crypto API, IndexedDB, WebAuthn, Firebase

I built a password vault that encrypts data with AES-GCM before saving it to IndexedDB. Encrypted Firebase sync is optional.

Menstrual cycle tracking app React, TypeScript, Tailwind CSS, Node.js, PostgreSQL, JWT, Capacitor

I built a cycle and wellbeing tracker that saves changes offline and retries sending them to a PostgreSQL-backed API. I prepared iOS and Android projects with Capacitor.

Technical Skills

Languages:	**TypeScript** · **JavaScript** · **C#** · **SQL** · Java · Python · Bash · C
Frontend:	**React** · **Next.js** · Vite · Tailwind CSS · Zustand · HTML5 / CSS3
Backend & data:	**Node.js** · **.NET** · Express · REST APIs · **PostgreSQL** · SQL Server · Prisma · **Supabase** · Firebase
Cloud, DevOps & Testing:	**Git** · **GitHub Actions** · **Docker** · **Linux** · AWS · **Azure** · Vercel · Vitest · Playwright

Additional Training

Advanced Generative AI Applications — University of Burgos
